

## Rotator Tracker : Vision Tool

copyright 2019BrilliantTherapy.com

**Option 1:** Using a highlighter to mark letters/numbers on the wheel, see how many the client/viewer can find in 1 or 2 minutes. Viewer must mark them off in order; (A,a,1,B,b,2,C,c,3....) or (Z,z,26,Y,y,25,X,....). They may rotate the wheel as they look.

**Option 2:** Cut out and laminate the Rotator Tracker. Use a fastener to place it on to a plate that has the edge cut off allowing the Tracker to be easily turned. While therapist turns the Tracker slowly and steadily, allow the viewer to point to each letter/number in the order mentioned above.

**Option 3:** Cut out and laminate the Rotator Tracker. Use a fastener to place it on to a plate that has the edge cut off allowing the Tracker to be easily turned. Fasten another plate on top with a cut out section allowing viewer to only see a pie-shaped area of the Tracker as therapist turns it slowly while the viewer calls out the letters/numbers in order when they see them.
